HOW IT WORKS

- **CONTACT:** Your personal concierge will schedule your FREE (no obligation) Energy Analysis which will help pinpoint savings at your stores that can be found with LED lighting.
- **INTRODUCTION:** Not everyone's goals are the same for an LED project. From cost savings to the aesthetics of a lighting project, we want to get a clear picture of your goals so we can develop a customized solution for you. Any past LED installs will be discussed along with overall store vision.
- **ENERGY ANALYSIS:** Our experienced team will do a complete audit of your stores. We analyze and account for every fixture to ensure you get an accurate savings analysis. This is also where we can prioritize fixtures and areas where you will get the most savings.
- **PROJECT REVIEW:** Your proposal from Vivid Energies will contain the results of the Energy Analysis, an estimate on exactly what your store will save with the new LED lighting and expected ROI based on your current energy rate, hours of operation and wattage reduction. Any available rebates will also be included in the proposal.
- **YES - I AM READY:** You have decided to move forward with the project! Next step is to review the terms and scope of the project, decide on payment terms and method. Most importantly, this is the time to answer any remaining questions so you are comfortable with the project.
- **INSTALLATION:** While you focus on your day to day operations, our team will convert your stores to the proposed LED lighting system. So sit back, relax and start realizing the beauty and savings of your new lights.

• Our process will take you through a progression of savings including; energy audit, lighting selection, manufacturing, installation and rebates. Our team will ensure a bright, beautiful and efficient space.
